

¹ These ports are also needed to communicate with federated ArcGIS Server sites that use webhooks. ² If you use ArcGIS tools to deploy on Amazon Web Services or Microsoft Azure, the object store is in a cloud service location instead.

○ Ports need to be available on individual machines. No external communication is needed.

↻ Ports used for communication between machines in the same site or data store. For example, all machines in a single ArcGIS Server site or a single object store.

↑ Ports used for single direction communication between different components or sites.

↕ Ports used for inbound and outbound communication between different components or sites.
